

Job Description

Designation	:	UI/UX Developer
Location	:	New Delhi – Jasola District Centre
Company Website	:	www.tlgroup.com

Key Responsibilities

1. Responsible for front-end development of highly dynamic web-based applications by following best practice coding standards, appropriate unit tests, integration tests and deployment scripts.
2. Participate in the software development process as defined by the Agile Scrum process. This includes participating in the requirements gathering process.
3. Possess a proficient working knowledge of the following technologies: React, HTML, JavaScript, CSS, REST based APIs, and JSON.
4. Ability to build strong relationships and operating rhythms with Product Owners, Business Analysts and Stakeholders to efficiently implement user experiences that are Cohesive, inclusive and well-informed.
5. Solid experience in creating wireframes, storyboards, user flows, process flows and site maps
6. Strong visual design and user experience skill set including strategy, information architecture, and design aesthetic.
7. Ability to quickly iterate on multiple interactive design solutions and work through details.
8. Apply strategic thinking to design and deliver aesthetically pleasing innovative user centric design and experiences across web and mobile platforms and devices.
9. Produce user flows, wireframes, prototypes (for stakeholder discussions/approvals), user interface specifications, and final graphics with a strong visual design element.

Desired Skills

1. Experience shipping innovative and successful consumer products.
2. Proficient skill level in the standard tools of the design trade, e.g. Sketch, Photoshop, Illustrator, Azure, etc.
3. Strong visual and typographic sense
4. Knowledge of HTML & CSS is a bonus but not a must up to date with the latest Web trends, techniques and technologies.
